- Experience working in a remote international team.

Experience

Aussiedev Consulting

Full Stack Software Engineer

January 2016 - Present (8 years 6 months)

Melbourne, Australia

Developed many projects related to the sale, installation, and maintenance of solar panels and air conditioners. Created an API, as well as functionality for mobile applications using React Native for iOS and Android. Developed a low-level implementation of data exchange between a mobile application and a smart inverter using Modbus and BLE. Made several web3 projects related to NFTs and crypto wallets. Developed many admin panels using complex database queries.

Altir

Technical Consultant

September 2023 - June 2024 (10 months)

Телингана, Индия

I helped a development team from India develop and release two mobile applications for working with a smart inverter, a device that collected information about the electricity generated by solar panels.

I developed a unified architecture and code base for both applications using React Native, as well as a protocol for exchanging information between the application and hardware via Modbus using Bluetooth LE. I helped a development team from India develop and release two mobile applications for working with a smart inverter, a device that collected information about the electricity generated by solar panels.

I developed a unified architecture and code base for both applications using React Native, as well as a protocol for exchanging information between the application and hardware via Modbus using Bluetooth LE.

I also developed the backend and API for these mobile applications.

I gained good experience communicating and working in an international team, as well as mentoring other developers.

Bruttex

Full Stack Developer

August 2018 - November 2019 (1 year 4 months)

Киев

Designed and successfully implemented a system for automatically creating ads from client feeds with subsequent uploading to MCC. All restrictions of Google Adwords were taken into account. Also, this project was used to update the status of ads/groups and prices of online store products using parameters.

Dok.ua

PHP Developer

October 2015 - December 2017 (2 years 3 months)

Киев

Maintained and expanded the capabilities of the internal CRM system in the development team. Designed and developed new modules for working with suppliers, and quick setting of the items characteristics. Integrated the API of "Nova Poshta" and other third-party services. Updated client profile.
